BAMBOO SHIELD - 100 MIL - 36 INCH

Bamboo Shield is a diversion type control method with a smooth surface on the side facing your bamboo planting. It is made from HDPE, high-density polyethylene.

BAR-S10036

36" Inch x 100 MiL

MATERIAL SPECIFICATIONS

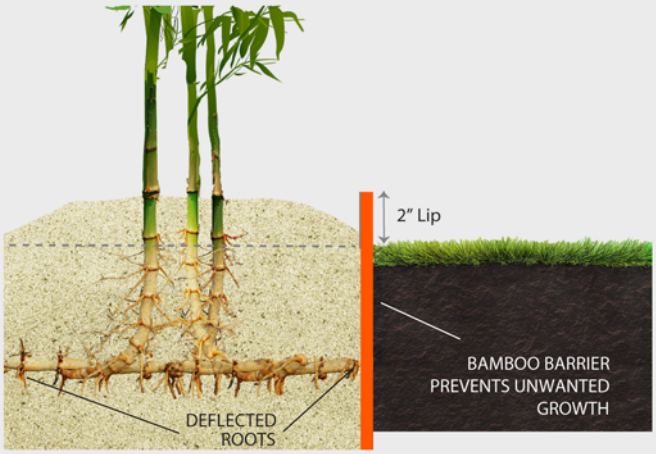
CONTROL TYPE
Diversion

MATERIAL
High molecular weight, high density polyethylene copolymer. 100 MIL thickness & 36" depth.

LENGTH & PACKAGING
Each roll is extruded in a maximum of 200 feet, 4 rolls per pallet. Weighs 1.51 pounds per linear foot.

FEATURES
- Controls growth of bamboo by limiting rhizome (root) expansion
- Protective side is chrome rolled to provide a better rhizome deflection surface.
- Uses post-industrial recycled waste whenever available
- Subterranian longevity of 100+ years
- Puncture resistant to 200 lbs.f
- Made in the USA

APPLICATION TYPES



HOW TO CHOOSE?
There may be existing structure that makes a surround installation unnessessary or impossible. For most installations we recommend the surround install so further maintenance is not nessessary.

LINEAR INSTALLATION
Line just one side of the bamboo to prevent it spreading in a certain direction. In most circumstances this method will require additional maintenance down the road.

SURROUND INSTALLATION
Surround bamboo on all sides making a complete seal. This will prevent rhizomes from spreading outside of the desired control area.

CLAMP KIT
Use the all-plastic clamp kit for a tight seal that will secure the shield together. It will last for many decades to come without the worry of corrosion. Comprised of front & back 200 MIL straps and nylon PM6 nuts and bolts.
